Table 2: NSRL thick-target experiment schedule

Beams	400  MeV/n			800  MeV/n			$1500^* \text{ MeV/n}$		
	Al	HDPE	AlPE	Al	HDPE	AlPE	Al	HDPE	AlPE
H	1/3 <sup>†</sup>	2	3	1	2	3	2	2	3
Не	1	2	3	2	2	3	2	2	3
$\mathbf{C}$	2	3	3	2	3	3	2	3	3
Si	2	3	3	2	3	3	2	3	3
Fe	1	2	3	1	2	3	2	2	3

<sup>1 =</sup> March 2016, 2 = November/December 2016, and 3 = November 2017

\*2500 MeV used instead of 1500 MeV/n for H beams; for heavier ions it was sometimes slightly below 1500. <sup>†</sup>400 MeV H incident on 20 g/cm<sup>2</sup> Al was also repeated in November 2017.
